TECHNICAL PROJECTS

SpaceVacation

[GitHub](#) | [App](#)

Role: Back End and Front End

This project was built to be used as a fun way to get students and others excited about space travel. The site used JavaScript and JQuery to manipulate the DOM. It called on multiple external APIs to retrieve information and was styled with CSS.

Tech used: HTML, CSS, JavaScript, JQuery, APIs.

Fantasy Football Advisor

[GitHub](#) | [App](#)

Role: Back End

This project was built to help newcomers to Fantasy Football with their draft. The site uses JavaScript for coding. It uses a SQL database and uses Express and Sequelize to make database calls and store items on the database utilizing internal APIs.

Tech used: HTML, JavaScript, Express, SQL database, Sequelize

React Google Book Search

[GitHub](#) | [App](#)

Role: Full App Development

This project was a full MERN stack application. It allows users to search for a book using the Google Books API. Books can be saved to a MongoDB using JavaScript, Mongoose, and Express.

The site was styled using Bootstrap and CSS.

Tech used: HTML, Bootstrap, CSS, JavaScript, MongoDB, Mongoose, Express
